Product Description

DA-8506XS is a stabilized chlorinated fatty ester designed to offer lubricity and wetting characteristics, as well as extreme pressure properties, to the fluids in which it is incorporated. It is a nonflammable, non-corrosive, low volatile liquid at room temperature.

DA-8506XS is fortified against corrosion. It is typically applied in straight and soluble oil machining, drawing and stamping fluids when a formulation requires additional wetting, lubricity or EP properties.

DA-8506XS may be stored in an original container or bulk storage tank. Exposure to 0°F for an extended period will cause significant viscosity increases. Recommended storing temperatures range from 80 - 100°F. Blending should not exceed 130°F. Prolonged exposure to temperatures in excess of 100°F may result in darkening of product and release of corrosive by-products.
