Supplier - FUNCTIONAL V-101

Viscosity Index Improver in Bale Form Viscosity Modifiers

## **Typical Properties**

## **Product Description**

**FUNCTIONAL V-101** is a viscosity index (V.I.) improver polymer in concentrated bale form. It is dissolved in oil to prepare an economical additive for multi-grade engine oils or an aftermarket "oil treatment" additive. It may also be used as an inexpensive thickener for oil, to avoid blending with expensive oils like bright stocks. Plants not having grinders should use **FUNCTIONAL V-114** "crumb" solid V.I. improver.

## **COMPOSITION:**

**FUNCTIONAL V-101** is an olefin copolymer derived from ethylene and propylene, which has been used as a V.I. improver by major oil companies. Its physical form is 55 lb (bale dimensions are approximately 27 "x 19" x 5") polyethylene-wrapped "bales", which need to be ground before dissolving in oil.

## **HANDLING:**

**FUNCTIONAL V-101** should be stored below about 140°F (60°C), as higher temperatures may cause the polyethylene wrap to stick. It is not necessary to remove the wrap before grinding if the polymer dissolves at 80°C (176°F) or at higher temperature. It is a nonhazardous material; see the current Material Safety Data Sheet. Dissolving is best accomplished by grinding into oil at a temperature of 180-230°F (85-110°C). (Higher temperatures will not affect **FUNCTIONAL V-101**, but may darken the diluent oil.)

SAE Grade (Basestock ISO Grade)	Suggested Treat Rates, %wt
5W-30 (22)	0.60
10W-30 (32)	0.37
10W-40 (32)	0.70
